

# Pipeline Forecasting

# What is our Project?

In the current system, sales reps report to their region managers the number of accounts they'll be able to close from their pipeline based on "feelings". This system yields a 10-15% accuracy rate. To improve this accuracy, Kelly Springer created an algorithm to help regional managers better gauge these pipeline forecasts. The objective of our project is to assess this algorithm and improve it where needed. We'll accomplish this by first assessing the accuracy of the current algorithm. Then we'll adjust the weights of the current algorithm criteria. We'll conclude by identifying new criteria relevant to pipeline forecasting.
